

Sealed-cohort ROC curves, all three arms (n=56)

Per-donor probabilities regenerated deterministically from frozen, already-committed inputs; verified to reproduce the committed AUROC exactly.

Source: results/l2_sealed_predictions_regenerated.json, produced by scripts/22_regenerate_sealed_predictions.py (deterministic re-derivation from already-committed feature artifacts; not a new sealed-cohort access). Every regenerated AUROC verified to match results/l2_sealed_results.json exactly.
